

Estimate Home Water Use

How much water does your family use per day? The following calculations will help you estimate approximately how many gallons of water your family consumes in a single day.

1. (Daily showers x Minutes per shower) x 3 gallons	=	
2. Daily baths x 36 gallons for full bath or 18 gallons for half tub	=	
3. Total daily flushes x 3 gallons	=	
4. Total daily tooth brushings x 3 gallons per minute running	=	
5. Total minutes water runs while washing dishes x 3 gallons	=	
6. Total minutes spent washing hands x 3 gallons	=	
7. (Times dishwasher runs per week / 7) x 12 gallons per wash	=	
8. (Weekly washer runs / 7) x 44 gallons per load	=	
9. Number of people in house x 10 misc. gallons	=	
10. Number of minutes using hose x 6 gallons	=	
11. Add total gallons to find total daily use	=	
12. For average monthly usage multiply by 30	=
